SCOPE OF WORKS

Engaged by Built, our team delivered specialised drainage infrastructure upgrades for a City of Melbourne-owned stormwater network along Latrobe Street. The project required careful navigation of existing underground services and was executed in a highly complex, high-traffic environment within the Melbourne CBD road reserve.

Works included:

- Replaced and upgraded 85 linear meters of DN300 stormwater main.
- Constructed and installed five (5) new stormwater pits.
- Conducted comprehensive post-works CCTV inspections and delivered final Wincan reporting for project sign-off.
